

## CSS Animation

### Ex1:

Use: grid, opacity, gradient color and shadow text

**Ex2:**

Use CSS animation and apply below instructions:

The sun should **rotate infinitely**.

The cloud should be next to the sun and move infinitely from right to left and left to right.

The cloud must **not touch the sun** when moving.

example:

---

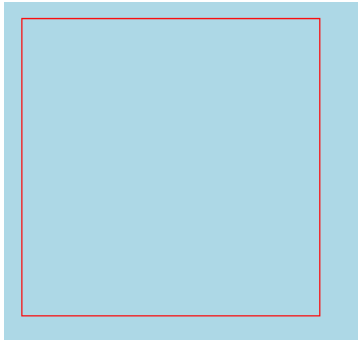

example:

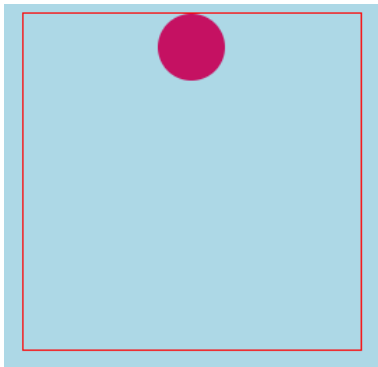

**Ex3:**

1- Create square 200X200 pixel.

2 - Create a circle and place it in the middle.  
hint: use class with margin

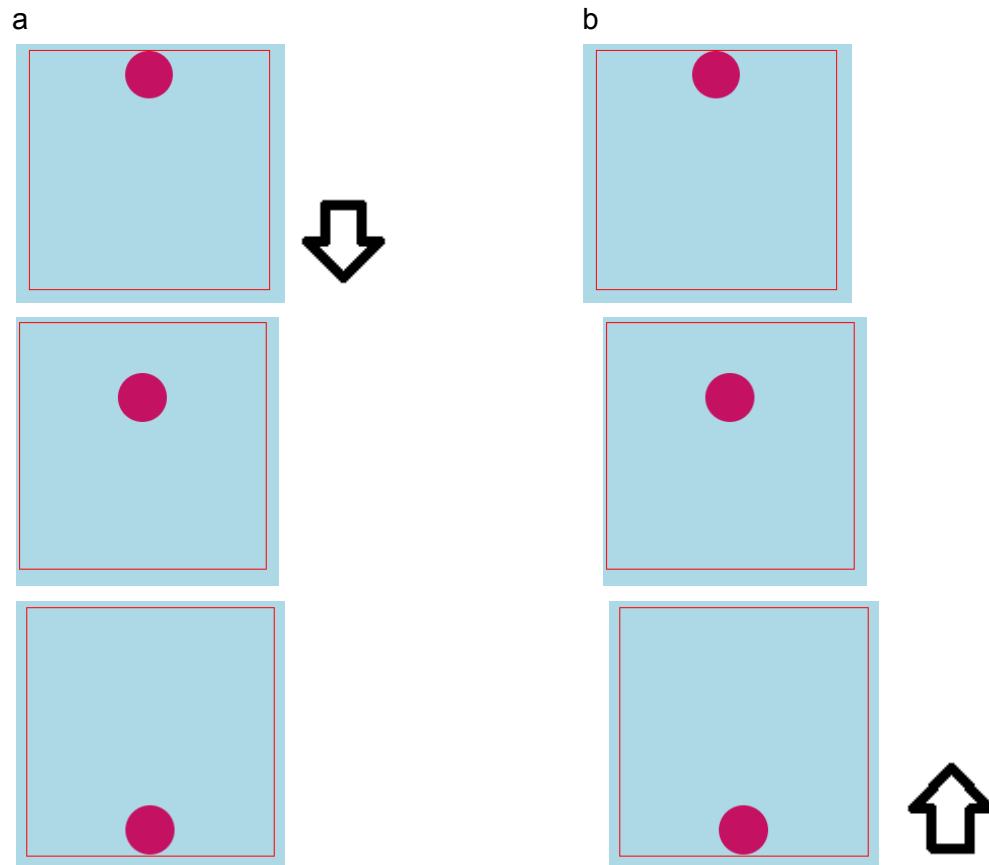

3 - Create an **infinite** animation (ball) with **2 seconds duration**.

a - first create the animation moves up and down.

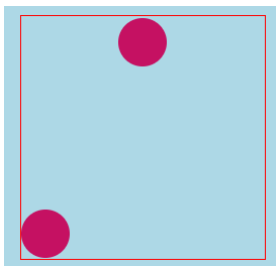

b - second, make it move down to up.

The ball animation must stay in the red square.

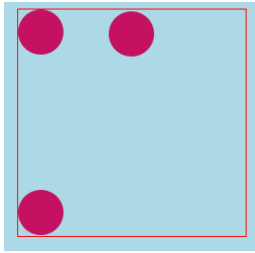

4 - Create another ball.

The second ball has the same animation but has a different moving direction(start and end from other points than the first ball, for example the ball can move in a diagonal direction).

5 - Create another one with a different moving direction.

6- Change the color for **each ball** when the percent of the keyframes change.  
Example:
